Professional Summary

AWS Certified Developer – Associate Computer Science student with hands-on experience building full-stack applications using React, Node.js, Express.js, and PostgreSQL. Proven ability to design and ship production-grade REST APIs, containerized backends, and responsive frontends, backed by strong cloud deployment experience on AWS and Render.

Technical Proficiencies

- **Frontend:** React (Hooks, React Router, Props & State, Performance Optimization), JavaScript (ES6+), HTML/CSS
- **Backend:** Node.js, Express.js, FastAPI, Python, REST API Design, JWT/RBAC Auth, Async/Await, Middleware
- **Databases:** PostgreSQL (Joins, Indexing, Transactions, Schema Design), DynamoDB, SQLAlchemy ORM, SQL
- **Cloud & DevOps:** AWS (Lambda, API Gateway, S3, EC2, RDS, Cognito, SQS/SNS), Docker, Terraform, CI/CD
- **Tools:** Git, Postman, Linux (RHCSA); familiar with Kubernetes, Jenkins, Ansible

Experience

AWS Development with DevOps Trainee — Technical Hub Pvt. Ltd. May 2025 – June 2025

- Deployed and secured a 2-tier web application on AWS, provisioning EC2 instances behind an NGINX reverse proxy to serve application traffic.
- Designed VPC network architecture with segmented public/private subnets, custom route tables, and layered security groups to enforce network isolation.
- Implemented least-privilege IAM roles and policies to govern secure, resource-to-resource access across the AWS environment. make this three points the one point with two lines.

Projects

AI — Enterprise Multi-Cloud Intelligence & GenAI Platform — *Fast API, Lambda, Groq, React.js, DynamoDB, ECS Fargate, Secrets Manager, RDS, Cloudformation.* [GitHub Repository](#)

- **Problem:** Cloud infrastructure decisions still run on static spec sheets and manual spreadsheet comparisons, while ad-hoc LLM answers hallucinate numbers — leaving architects to re-verify every recommendation by hand.
- **Solution:** Built a serverless AI decision engine benchmarking 5 hyperscalers in real time — a Groq-hosted Llama 3.3 generates schema-validated comparisons, a weighted engine ranks them into a grounded top recommendation, and curated fallbacks keep the platform live even when the LLM is unreachable.

Real-Time Multiplayer 3D Car Game — *Three.js, Node.js, WebSockets, HTML5, Render, Vercel* [GitHub Repository](#)

- **Problem:** Browser-based multiplayer games often lack intuitive input methods and struggle with state synchronization latency, limiting the immersion of interactive 3D environments.
- **Solution:** Engineered a low-latency 3D racing environment using Three.js with a Node.js/WebSocket backend for real-time state management; implemented a cross-device control system via QR code pairing that transforms a user's mobile device into a steering controller.

Coding Portfolio

- **LeetCode:** 100+ data structures & algorithms problems solved – leetcode.com/u/yathamsridharreddy
- **HackerRank:** 4-Star rated in C, 1-Star rated in SQL – <https://www.hackerrank.com/profile/yathamsridhar>
- **CodeChef:** 350+ competitive programming problems solved – codechef.com/users/yathamsridhar

Certifications

- **AWS Certified Developer – Associate** – Amazon Web Services
- **MongoDB Associate Developer** – MongoDB
- **Operating Systems Basics** – Cisco
- **HTML & CSS Certification** – Certiport

Education

Aditya College Of Engineering And Technology, Surampalem	2023 – 2027
<i>Bachelor of Technology in Computer Science</i>	<i>CGPA: 8.09</i>
Bhashyam Junior College, guntur	2021 – 2023
<i>Board of Intermediate Education Andhra Pradesh, MPC</i>	<i>Percentage: 94.7</i>
